Time To Know Them Marilyn S. Sternglass,2017-09-25 In a time of declining resources in institutions of higher education, we grapple with how priorities are to be set for the limited resources available. Most vulnerable are those students labeled underprepared by colleges and universities. Should we argue that the limited resources available ought to be used to support these students through their undergraduate years? And, if we decide that we want to do that, what evidence of their potential for success can we provide that will justify the use of these resources? Through longitudinal research that follows students who have been so labeled over all their college years, we can begin to find answers to these questions. Time to Know Them is the first book that follows the experiences of a group of students over their entire academic experience. No previous studies have brought together the factors incorporated in this study: *examining writing and learning on a true longitudinal basis; *studying a multicultural urban population; *investigating the relationship between writing and learning by examining papers written over time for regularly assigned academic courses across a range of disciplines; and *taking into consideration non-academic factors that influence academic performance such as race, gender, socio-economic status, and ideological orientation. Through interviews twice a semester over six years, the collection of

papers written for all courses, observations of instructional settings, and analysis of required institutional tests of writing, the author has been able to pull together a more complete picture of writing and intellectual development over the college years than has previously been available in any study. Students are seen to acquire the ability to handle more complex reasoning tasks as they find themselves in more challenging intellectual settings and where risk-taking and exploration of new ideas are valued. The integration of students' previous life experiences into their academic studies allows them to analyze, critique, modify, and apply their previously held world views to their new learning. These changes are seen to occur over time with instructional settings and support providing key roles in writing development. Personal factors in students' lives present difficulties that require persistence and dedication to overcome. Never before have the complexities of real individual lives as they affect academic performance been so clearly presented.

Genocide Adam Jones, 2006-09-27 An invaluable introduction to the subject of genocide, explaining its history from pre-modern times to the present day, with a wide variety of case studies. Recent events in the former Yugoslavia, Rwanda, East Timor and Iraq have demonstrated with appalling clarity that the threat of genocide is still a major issue within world politics. The book examines the differing interpretations of genocide from psychology, sociology, anthropology and political science and analyzes the influence of race, ethnicity, nationalism and gender on genocides. In the final section, the author examines how we punish those responsible for waging genocide and how the international community can prevent further bloodshed.

Graduate Writing Across the Disciplines Marilee Brooks-Gillies, Elena G. Garcia, Soo Hyon Kim, Katie Manthey, Trixie G Smith, 2020-11-02 In *Graduate Writing Across the Disciplines*, the editors and their colleagues argue that graduate education must include a wide range of writing support designed to identify writers' needs, teach writers through direct instruction, and support writers through programs such as writing centers, writing camps, and writing groups. The chapters in this collection demonstrate that attending to the needs of graduate writers requires multiple approaches and thoughtful attention to the distinctive contexts and resources of individual universities while remaining mindful of research on and across similar programs at other universities.

Unequal Treatment Institute of Medicine, Board on Health Sciences Policy, Committee on Understanding and Eliminating Racial and Ethnic Disparities in Health Care, 2009-02-06 Racial and ethnic disparities in health care are known to

reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however, increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In *Unequal Treatment*, a panel of experts documents this evidence and explores how persons of color experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? *Unequal Treatment* offers recommendations for improvements in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives. *Unequal Treatment* will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color.
